

ACE[®] ABA Software System

The Autism Curriculum Encyclopedia[®] (ACE[®]) lesson plans are developed by the research and curriculum team at The New England Center for Children[®], a world-renowned autism education center and research institute. Our team of experts includes more than 19 PhDs and 183 BCBAAs who work together — combining research, educational expertise, and experience — to ensure that lesson plans are always on the cutting edge of applied behavior analysis (ABA) and special education.

We've incorporated The New England Center for Children's 40+ years of teaching, techniques, and research into an easy-to-use web-based program for special educators and ABA therapists around the world.

BY THE NUMBERS - 2018

Online Teaching System

ACE is a cloud-based program easily accessible on any platform with an internet connection.

ABA Curriculum

ACE is the most comprehensive autism software package available. Effective applied behavior analysis relies on customizing treatment and curriculum for each student. With thousands of customizable lesson plans, ACE helps educators tailor lessons for their students to maximize life-long skills.

Assessments

ACE assessments help teachers easily identify skills deficits and the corresponding lesson plans to teach these skills. ACE takes the guess work out of the process so teaching can begin as soon as the assessment is complete.

Paperless Progress Monitoring

Evaluating progress on each targeted skill is a hallmark of effective ABA services. Instead of paper and pencil, ACE provides easy data entry and generates reports and graphs that allow teachers and clinicians to see if a student is not meeting goals. This allows educators to immediately change course of action to ensure maximum student progress.

Each ACE software module has been developed with reporting tailored to the needs of our ACE partners, including private schools, public schools, consultants, clinics, and universities.

The Future of Autism Treatment

NECC® is always on the cutting edge of the latest research, much of which is done right here at NECC. Our team has written more than 268 peer reviewed journal articles and presented more than 2,200 times at conferences around the world. That commitment to being a leader in autism education is reflected in all aspects of the ACE application. With the opening of our new John and Diane Kim Autism Institute in 2016, a facility designed and built to further research and professional development programs, we further strengthen our commitment to effective research being a cornerstone in the development of the ACE.
